—
—
—

Thankful to the Public for the Patronage
so freely bestowed upon the old Firm, I
respectfully solicit a continuance of
the same.

WM. M. KRIDER.

Postoffice Building, Mineral Park.

CONCENTRATOR

beyond question the cheapest and most
effective machine of the kind now in use,
adapted to all grades and classes of ore.

This machine has been thoroughly tested
for the past two years under a great variety
of conditions giving most extraordinary re-
sults, surpassing of anything ever before
seen.

A recent competitive test made with the

Frie at the Carlsbad mine in New Mexico

showed an advantage of 30 per cent in favor

of the Concentrator. The amount saved over

the year being sufficient to pay the entire cost

of the machine nearly every month in the year.

The following is an enumeration of its
many advantages over all other machines:

The cost is not more than half that of
any other of equal capacity, and its weight is
nearly 1,600 pounds, thus greatly reducing the cost of transportation.

Second—The expense of setting up in

running order is not more than one third

that of the Frie, or any other belt machine

much less greasing and timber work being

absent.

Third—The expenditure for repair is not

more than one-fifth that of any belt ma-

chine, and they will last fully three times as long, working under the same conditions.

Fourth—Not more than one-half the

space required—a point of great impor-

tance when a considerable number are used.

Fifth—No special skill and very little

care is necessary to operate it.

Sixth—No more water is required than is

furnished by the batteries.

Seventh—It saves all the amalgam, gold

and silver that escape the batteries, part of

which is an invaluable feature, and claimed

by no other, making the machine worth

more than it costs for this purpose alone.

Eighth—A much coarser grade of ore can

be handled successfully than by any other

method, and in many instances where fine grinding is not necessary

to eliminate the mineral.

Ninth—It has no small and delicate

mechanism, requiring nice adjustment and the

closest attention—an unnecessary objection

to all belt and other forms of machines, mak-

ing them unfit for the rough service of a

mine.

Tenth—Great simplicity of construction

and small number of wearing parts. The

whole machine is comprised in seventeen

pieces, only three of which are subject to

any special wear, and these can be replaced

at a trifling cost. The Frie has

some similar machines many more, in

making a compilation of parts that involves

constant repair and great expense in this

way, as well as in loss of time.

We are aware that the most sweeping

and most sweeping claims are made for nearly

every competitor in the market, but it is

a well-known fact that the results of their

operation have not in any instance made

good these claims. The advantages here set-

forth for the Frie, as well as the state-

ments made, we are prepared to substantiate

by actual working results.

Price—about \$1,700.00
